**Equipment**

Speakers & Mounting:

• Two stereo speakers from MassArt.

• Monitor Stands – Depending on placement need

Audio Interface & Cables:

• Focusrite Scarlett 2i2 (or equivalent) – USB audio interface

• 10ft 1/4” TRS to XLR (Male) Cables (×2) – To connect the audio interface to the speakers.

• USB-A to USB-C-to connect the audio interface to windows laptop

Power & Management:

• IEC Power Cables (×2) – For the speakers (usually included)

• Cable Management Clips or Velcro Straps – To keep things tidy

Playback Source & Extras:

•Windows Laptop

**Signal Flow & Connection Guide**

1. Placement & Mounting

• Position the two stereo speakers from MassArt on monitor stands at ear level, angled slightly inward for optimal listening.

• Ensure the speakers have stable placement and are not directly against walls to minimize reflections.

2. Powering the Speakers

• Connect the IEC power cables (×2) to each speaker and plug them into a surge protector power strip for safety.

• Keep the speakers turned off before making audio connections.

3. Connecting the Audio Interface

• Use the USB-A to USB-C cable to connect the audio interface to the Windows PC.

• Install the latest Focusrite Scarlett drivers from the official website if needed.

• Set the Scarlett 2i2 as the default audio output in Windows Sound Settings and in your DAW or media player.

4. Connecting the Speakers to the Interface

• Take two 10ft 1/4” TRS to XLR (Male) cables and connect:

• Left output (1/4” TRS) on Scarlett 2i2 → XLR input on the left speaker

• Right output (1/4” TRS) on Scarlett 2i2 → XLR input on the right speaker

• Make sure the gain/volume on the speakers is initially set low before testing sound.

5. Final Setup & Sound Check

• Adjust speaker placement as needed and use cable management clips or Velcro straps to keep cables organized.

• Open a test audio file or DAW on the Windows PC and slowly increase the interface’s output level.

• Adjust speaker volume accordingly and ensure both channels are balanced.

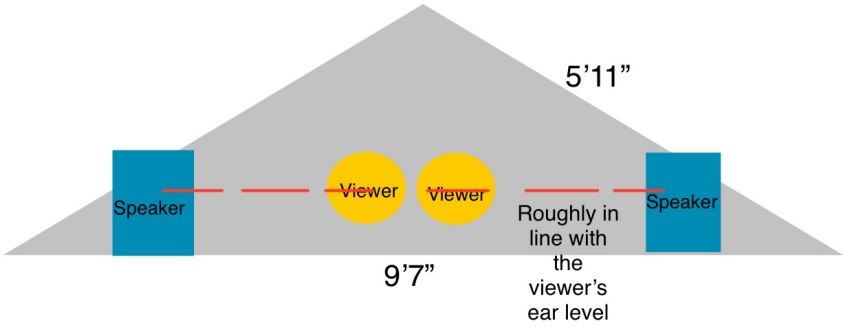

**Placement**

Corner-Focused Setup

• Speakers: Place both speakers at the two widest corners of the triangle, angled toward the center of the space.

• Height: Use the stand to adjust the height at ear level when one sits down (~1m)

• Listening Position: Ideally near the center of the triangle.
